

Green Homes Sell Faster and often for More Money

More than half of consumers rank green and energy-efficiency as top requirements for their next homes. **Green homes sell at higher prices and faster than comparable, conventional homes. (USGBC 2016)**

A green home should not just be energy efficient; it should also consider the health of its occupants.

Did you know? Many older homes have plumbing systems that include what are called “lead contributors” such as lead piping, lead solder and brass fixtures. These can cause lead to leach into the drinking water in those homes, potentially poisoning the residents living inside, and causing lifelong damage.

Choose LeadSmart – The Right Choice for a Healthy Home

LeadSmart offers peace of mind by testing, identifying and **bringing properties into compliance with the US EPA guideline for lead resulting from the leaching effects from plumbing system components.**

Once a property is deemed compliant, a LeadSmart Certificate is issued, confirming that the property is in compliance with EPA standards, and **protecting those who inhabit the home from the dangers of lead poisoning through drinking water.**

The LeadSmart Program is backed by \$1 Million Professional Errors and Omissions Insurance.

Go Green – Be LeadSmart

The LeadSmart Program protects homeowners from the risks of lead poisoning. You can also visit www.aceduraflo.com/leadsmart for more information.

About LeadSmart®

LeadSmart is an on-site lead testing and lead remediation service, leading to a property being LeadSmart Certified. LeadSmart Certified Testers are located in Southern California, Texas, Florida, and the Washington, D.C. Metro areas. LeadSmart is a division of ACE DuraFlo / ePIPE.
